

ScannerPoint: Google Stitch Screen Prompts

Oct 1, 2026 · @Aneesha

How to use these prompts

There are 29 screens across 6 audiences. Generate them **one screen per prompt**, always starting with the shared style block from the next section, so every screen looks like one product.

1. Create one Stitch project for ScannerPoint, set to **Web** (desktop).
2. Generate the **Landing page** first. When you're happy with it, generate everything else in the same project so Stitch can reuse its look.
3. For each screen, paste the **Style block + that screen's prompt**. Don't paste several screens at once.
4. Fix things with short follow-up messages ("make the sidebar narrower", "use the rust orange only on the Save button") instead of regenerating.
5. Export to Figma or HTML/Tailwind, then rebuild each screen as React components wired to your API (notes sections 9-10).

Field names and statuses in the prompts match your backend DTOs where they exist, so the design and the API line up. Where a screen needs something the backend doesn't have yet, the last section lists it.

Screen list

#	Screen	Who sees it
P1	Landing page	Everyone
P2	Sign in	Everyone
P3	Create account	Customers
C1	Customer dashboard	Customer
C2	My vehicles	Customer
C3	Vehicle detail: health and history	Customer
C4	Book a service (3 steps)	Customer
C5	Live repair tracker	Customer
C6	Approve additional work	Customer

#	Screen	Who sees it
C7	Invoices and payments	Customer
C8	My profile	Customer
R1	Front desk dashboard	Receptionist
R2	Customers	Receptionist, Admin
R3	Customer detail (vehicles, bookings, invoices)	Receptionist, Admin
R4	Appointments (calendar + list)	Receptionist, Admin
R5	Check-in and create job card	Receptionist, Admin
R6	Job card board	Receptionist, Admin
R7	Billing: create invoice and take payment	Receptionist, Admin
M1	My jobs	Mechanic
M2	Job card workspace	Mechanic
S1	Inventory overview	Storekeeper
S2	Spare parts	Storekeeper, Admin
S3	Part requests and stock movements	Storekeeper
S4	Suppliers	Storekeeper, Admin
A1	Business overview	Admin
A2	Users and roles	Admin
A3	Employees and payroll	Admin
A4	Services and maintenance rules	Admin
A5	Reports	Admin

All staff screens share one app layout (charcoal sidebar + top bar). The sidebar shows only the items that role may use, following the permission matrix in your PDF.

Shared style block

Paste this at the top of every prompt. It fixes colours as hex codes so every screen matches. Currency is assumed to be Sri Lankan rupees (Rs.); change it if needed.

PRODUCT: ScannerPoint – "Smart Diagnostics. Smarter Repairs." A web app for a vehicle service garage in Sri Lanka. Desktop web layout, 1440px wide, responsive down to tablet.

COLOURS (use exactly):

- Background: Crisp White #FFFFFF; alternate sections and page backgrounds Warm Beige #F4EFE6
- Charcoal #2B2D31 for the staff sidebar, dark sections and headings; Charcoal Light #3A3D43 for hover on dark
- Rust Orange #C2571A ONLY for primary buttons, active nav item, links and the current step; hover #A8480F
- Text: #1F2023 primary, #6B6F76 secondary; borders #E4DED3
- Status colours: success #2E7D4F, warning #C98A0B, danger #B3261E, info #2F6FAE (used only in badges and alerts, never as large fills)

TYPE: Inter (or similar modern sans-serif). Page title 28px semibold, section title 20px semibold, body 15px, table text 14px, labels 13px.

SHAPE: 8px corner radius on cards, inputs and buttons; 12px on large cards. Subtle 1px borders instead of heavy shadows. 8px spacing grid.

COMPONENTS (reuse everywhere):

- Primary button: rust orange fill, white text. Secondary: white with charcoal 1px border. Danger: red text button.
- Status badge: small pill with tinted background + coloured text.
- Data table: sticky header, zebra rows in beige, search box + filter dropdowns above, pagination below, row actions in a "...\" menu.
- Forms: label above input, helper/error text below in red, required fields marked *, Save button bottom-right, Cancel next to it.
- Side panel (drawer) slides in from the right for add/edit forms.
- Toast message top-right after saving.

ALWAYS SHOW STATES: loading skeletons, an empty state with an icon and a one-line call to action, and inline error messages. Use realistic Sri Lankan sample data (names like Nimal Perera, plates like CAB-4521, phone 077 123 4567).

STAFF APP LAYOUT (for staff screens only): fixed charcoal left sidebar 248px with the ScannerPoint logo, icon + label nav items, active item highlighted in rust orange; white top bar with page title, global search, notification bell with count badge, and user avatar menu showing name and role.

CUSTOMER APP LAYOUT (for customer screens only): white top navigation bar with logo, links (Dashboard, My Vehicles, Book a Service, Repairs, Invoices), notification bell and avatar menu; beige page background; content max 1200px centred.

Public screens

These sell the garage and get people signed in. Your original landing-page prompt was good, so P1 keeps its structure and swaps the made-up packages for ScannerPoint's real features.

P1 — Landing page

Screen: public marketing landing page for ScannerPoint.

1. Header: white bar, logo left; links Services, How it works, Smart features, FAQ, Contact; right side a secondary "Create account" button and a rust orange "Sign in" button.
2. Hero, split layout: left half a slanted charcoal overlay with headline "Know exactly where your car is in the repair process", subheadline "Book a service online, follow every repair stage live, approve extra work from your phone, and get reminders before problems start.", buttons "Book a service" (rust orange) and "How it works" (white outline). Right half: photo of a clean, modern garage workshop with a technician using a diagnostic scanner.
3. Beige strip with three short facts in a row, each with an icon: "Live repair tracking", "Approve extra work online", "Mileage-based service reminders". No invented statistics.
4. How it works, full-width charcoal section: 4 steps connected by arrows, circular outline icons: Create an account → Add your vehicle → Book a service → Track the repair live.
5. Services, white section, grid of 6 cards with icon + title + one line: Periodic service, Diagnostics and scanning, Brake and suspension, Engine repair, Air conditioning, Body and cleaning.
6. Smart features, beige section, 2 large cards side by side: "Live repair workflow" with a small mock of a horizontal progress tracker (Checked in → Inspection → Diagnosis → Repair → Quality check → Ready), and "Predictive maintenance" with a mock of a vehicle health score ring (82/100) and an upcoming-service list.
7. FAQ, accordion with 5 questions (How do I book? Can I approve extra repairs online? How are service reminders calculated? Which payment methods do you accept? How long does a service take?).
8. Footer, charcoal: logo and tagline, address, phone, email, opening hours (Mon-Sat 8:00-18:00), quick links, terms and privacy links, social icons.

P2 — Sign in

Screen: sign-in page, used by customers AND staff (the system detects the role after login).

Layout: beige page background, centred white card 880px wide split in two columns.

Left column (charcoal background): ScannerPoint logo, tagline "Smart Diagnostics. Smarter Repairs.", and a small illustration of a car with a diagnostic overlay.

Right column (white): heading "Sign in", fields Username and Password (with show/hide eye icon), "Remember me" checkbox, "Forgot password?" link right-aligned, full-width rust orange "Sign in" button, then "New to ScannerPoint? Create an account" link.

Show an error state variant: red alert above the form "Incorrect username or password". Show the button in a loading state variant.

P3 — Create account (customer)

Screen: customer registration page. Same split-card layout as the sign-in page.

Right column: heading "Create your account", subtext "Track your repairs and get service reminders."

Fields: Full name*, Username*, Email*, Phone number* (format 07X XXX XXXX), Address (optional), Password* (min 6 characters, with strength bar), Confirm password*.

Checkbox "I agree to the Terms of Use and Privacy Policy" with links.

Rust orange full-width "Create account" button. Link: "Already have an account? Sign in".

Show inline validation errors under two fields as an example ("Email is already registered", "Passwords don't match").

After success: a confirmation state with a check icon, "Account created", and a button "Add your first vehicle".

Customer portal

Car owners see only their own vehicles, bookings, repairs and invoices. All of these use the **Customer app layout** from the style block.

The repair stages come from your PDF's "Smart Repair Workflow" and are reused on every screen that shows progress: **Booked → Checked in → Inspection → Diagnosis → Awaiting approval → Parts ordered → Repair in progress → Quality check → Ready for collection → Collected.**

C1 — Customer dashboard

Screen: customer home after login. Customer app layout.

1. Charcoal welcome banner: "Welcome back, Nimal" and a line "You have 1 vehicle in the workshop." Three quick-action cards overlap the bottom edge of the banner: "Book a service" (rust orange icon), "Track my repair", "Pay an invoice".
 2. "In the workshop now" card: vehicle CAB-4521 Toyota Axio, job card JOB-7F3A21, a compact horizontal stage tracker with the current stage "Repair in progress" highlighted in rust orange, estimated ready time "Today, 4:30 PM", assigned mechanic "Kasun", and a "View live progress" link.
 3. Alert card (warning colour) "Action needed: approve additional work on CAB-4521 – Rs. 18,500" with "Review" button.
 4. "My vehicles" row: up to 3 small vehicle cards, each with plate, make/model, current mileage, a circular health score (e.g. 82/100, green/amber/red by score), and "Next service due in 1,200 km".
 5. Two columns: "Upcoming appointments" (list with date, time, service type, status badge SCHEDULED/CONFIRMED) and "Recent invoices" (invoice number, date, total, status badge PENDING/PARTIAL/PAID).
- Empty state variant for a new customer: "Add your first vehicle to start booking services" with a rust orange "Add vehicle" button.

C2 — My vehicles

Screen: list of the customer's vehicles. Customer app layout.

Header "My vehicles" with a rust orange "Add vehicle" button.

Grid of vehicle cards: licence plate (large, bold), make and model, year, current mileage, health score ring, "Last service: 12 Jun 2026", "Next due: Oil change in 1,200 km" with a small amber badge when due soon or red "Overdue" badge, and buttons "Book service" and "View details".

Add vehicle drawer (right side panel): License plate*, Make*, Model*, Year*, Current mileage (km)*, Fuel type (Petrol/Diesel/Hybrid/Electric), Colour, Save button. Show the error "This licence plate is already registered".

C3 — Vehicle detail: health and history

Screen: one vehicle's profile with predictive maintenance and digital service history. Customer app layout.

1. Header card: plate CAB-4521, Toyota Axio 2016, Hybrid, mileage 61,200 km with an "Update mileage" link, and a large vehicle health score ring 82/100 labelled "Good" with a one-line explanation "Based on mileage, time since last service and manufacturer schedule".
2. "Upcoming maintenance" table: item (Engine oil replacement, Air filter replacement, Brake inspection, Timing belt inspection), due at (km and/or date), status badge (Due soon / Overdue / OK), and a "Book now" button per row. Overdue rows highlighted with a red left border.
3. "Service history" as a vertical timeline grouped by year (2026, 2025, 2024): each entry shows date, job card number, services done (e.g. Oil change, Brake pads, Battery), mileage at service, mechanic, total cost, and "View invoice" link.
4. Right column: "Inspection reports" list with date and result badge PASSED / NEEDS_ATTENTION / FAILED.

C4 — Book a service (3 steps)

Screen: appointment booking wizard. Customer app layout. A 3-step progress indicator at the top: 1 Vehicle & service → 2 Date & time → 3 Confirm.

Step 1: choose a vehicle (selectable cards with plate and model), then choose a service type from selectable tiles with icons (Periodic service, Diagnostics, Brake service, Engine repair, Air conditioning, Body and cleaning, Other). If the vehicle has overdue maintenance, show a suggestion banner "Recommended: Oil change and brake inspection are due" with "Add to booking". Notes textarea "Describe the problem (optional)".

Step 2: month calendar on the left, available time slots on the right as pill buttons (8:00, 9:00, 10:30...). Fully booked slots shown greyed out and struck through. Message when a day is full: "No slots left on this day. Please choose another date."

Step 3: summary card (vehicle, service, date and time, notes, estimated duration) and a rust orange "Confirm booking" button.

Success state: large check icon, "Booking confirmed", reference number, "Add to calendar" and "Go to dashboard" buttons.

C5 — Live repair tracker

Screen: live status of one vehicle's repair. Customer app layout.

1. Header: CAB-4521 Toyota Axio, job card JOB-7F3A21, checked in 1 Oct 2026 9:12 AM, mechanic Kasun, estimated ready "Today, 4:30 PM".
2. A large vertical stepper with all 10 stages: Booked, Checked in, Inspection, Diagnosis, Awaiting approval, Parts ordered, Repair in progress, Quality check, Ready for collection, Collected. Completed stages have a green check and a timestamp; the current stage is rust orange with a pulsing dot; future stages are grey.
3. Right column: "Diagnosis" card with the mechanic's notes; "Work being done" checklist of repair tasks with done/not done ticks (Replace front brake pads ✓, Replace engine oil ✓, Inspect suspension – in progress); "Parts used" list with quantities.
4. An activity feed at the bottom: time-stamped updates ("10:05 AM – Inspection completed", "11:40 AM – Additional work requested").
5. When the stage is "Ready for collection": green banner "Your vehicle is ready to collect" with "View invoice" button.

C6 — Approve additional work

Screen: customer approves or rejects extra repairs found during diagnosis. Customer app layout, focused single-column card 720px wide.

Title "Additional work found on CAB-4521". Mechanic's explanation text and up to 2 photo thumbnails.

Table of proposed items: description, parts cost, labour cost, line total, each with its own Approve/Decline toggle. Example rows: "Replace rear brake discs" Rs. 14,000 + Rs. 3,000; "Replace wiper blades" Rs. 1,500 + Rs. 0. Running total updates based on toggles: "Approved additional cost: Rs. 18,500". Note: "Declined items won't be done. Your original repair continues either way."

Buttons: rust orange "Confirm my choices", secondary "Call the garage". After confirming: success state "Thanks – the workshop has been notified."

C7 — Invoices and payments

Screen: customer billing. Customer app layout.

Top: three small summary cards – Outstanding balance (Rs.), Paid this year (Rs.), Invoices.

Table: Invoice #, Date, Vehicle, Job card, Total, Paid, Balance, Status badge (PENDING amber, PARTIAL blue, PAID green), "View" action.

Clicking a row opens an invoice detail drawer: garage header, customer and vehicle details, line items (description, amount) split into Parts and Labour, subtotal, total, payments received (date, method CASH/CARD/TRANSFER, amount), balance due, and a "Download PDF" button.

C8 — My profile

Screen: customer account settings. Customer app layout.

Left vertical tabs: Personal details, Password, Notifications.

Personal details form: Full name, Username (read-only), Email, Phone, Address, Save button.

Password: Current password, New password, Confirm new password.

Notifications: toggles for "Repair status updates", "Vehicle ready for collection", "Service reminders", each with Email and SMS checkboxes.

Receptionist screens

The front desk runs the day: customers, vehicles, bookings, check-in, job cards and payments. All use the **Staff app layout**. The receptionist's sidebar: Dashboard, Customers, Appointments, Job Cards, Billing.

R1 — Front desk dashboard

Screen: receptionist home. Staff app layout, sidebar items Dashboard (active), Customers, Appointments, Job Cards, Billing. User menu shows "Dilini – Receptionist".

1. Row of 4 stat cards: Today's appointments (12), Vehicles in workshop (7), Awaiting customer approval (2), Ready for collection (3).
2. "Today's schedule" timeline list: time, customer, plate, service type, status badge (SCHEDULED / CONFIRMED / CHECKED_IN / NO_SHOW / CANCELLED) and a quick "Check in" button on confirmed rows.
3. "Delayed jobs" alert card (warning): jobs past their estimated completion time, with plate, stage, mechanic and how late ("+45 min").
4. "Ready for collection" list with plate, customer phone, invoice status and "Take payment" button.
5. Top-right primary actions: rust orange "New appointment", secondary "Walk-in check-in".

R2 — Customers

Screen: customer management. Staff app layout, Customers active. Header "Customers" with search (name, phone, email, plate) and rust orange "Add customer" button.

Table columns: Name, Phone, Email, Vehicles (count), Last visit, Has portal account (yes/no icon), Actions (View, Edit).

Add/Edit customer drawer: Name*, Phone*, Email, Address, and a toggle "Send portal invite by email". Save / Cancel.

Empty state: "No customers match your search".

R3 — Customer detail

Screen: one customer's full record. Staff app layout, Customers active.

Top: customer header card (name, phone, email, address, customer since) with Edit button.

Tabs: Vehicles | Appointments | Job cards | Invoices.

- Vehicles tab: table Plate, Make, Model, Year, Mileage, Health score, Next service due, actions (View history, Book). "Add vehicle" button opens a drawer (License plate*, Make*, Model*, Year, Mileage).

- Appointments tab: date/time, vehicle, service type, status badge.

- Job cards tab: card number, vehicle, current stage badge, mechanic, created date.

- Invoices tab: invoice #, date, total, paid, status badge.

R4 — Appointments

Screen: appointment scheduling. Staff app layout, Appointments active.

Toggle at top: Calendar | List.

Calendar view: week view with time rows 8:00-18:00 and day columns; each appointment is a coloured block showing time, plate and service type, colour by status. Show one clash warning (two bookings overlapping on the same bay) with a red outline.

List view: filters (date range, status, service type), table Date & time, Customer, Vehicle, Service type, Status badge, Actions (Confirm, Reschedule, Cancel, Check in).

New appointment drawer: Customer* (searchable select), Vehicle* (select filtered by customer), Service type*, Date & time* (only future), Notes. Show the validation error "Appointment date must be in the future".

Reschedule modal: new date and time picker with available slots.

R5 — Check-in and create job card

Screen: vehicle check-in form that creates a job card. Staff app layout, Job Cards active. Two-column form.

Left: Customer (pre-filled from appointment, or search for walk-ins with "Add new customer" link), Vehicle (select or add), Mileage at check-in*, Fuel level (slider), Customer's complaint / service requested*, Existing damage notes, checkbox list of items left in vehicle.

Right: Assign mechanic (dropdown showing each mechanic's name and current job count, e.g. "Kasun – 2 active jobs"), Estimated completion (date + time), Estimated cost (Rs., optional).

Bottom: rust orange "Create job card". Success toast: "Job card JOB-7F3A21 created and assigned to Kasun".

R6 — Job card board

Screen: all active job cards as a kanban board. Staff app layout, Job Cards active.

Columns: Checked in, Inspection, Diagnosis, Awaiting approval, Parts ordered, Repair in progress, Quality check, Ready for collection (horizontal scroll).

Each card: job number, plate, make/model, customer name, mechanic avatar + name, time in this stage, estimated ready time; a red "Delayed" badge when past the estimate.

Top filters: mechanic, date, search by plate. Toggle to a table view (Job #, Plate, Customer, Mechanic, Stage, Created, Est. ready, Total cost).

Clicking a card opens a read-only job detail drawer with the stage history and a "Reassign mechanic" action.

R7 — Billing: create invoice and take payment

Screen: invoicing for a completed job. Staff app layout, Billing active.
 Left: list of jobs "Ready for invoicing" (plate, customer, job #).
 Main area, invoice builder for the selected job: customer and vehicle header; "Parts" section auto-filled from parts used on the job card (part name, qty, unit price, line total); "Labour" section with editable rows (description, hours, rate, amount) and "Add labour line"; subtotal, discount, total in Rs. Button "Create invoice". Then a "Record payment" panel: amount* (defaults to balance), method* (Cash / Card / Bank transfer), reference, and rust orange "Record payment". Show status changing from PENDING to PARTIAL to PAID, and a warning if the amount is more than the balance: "Amount is greater than the balance due".
 Also a tab "All invoices" with a table: Invoice #, Date, Customer, Total, Paid, Balance, Status.

Mechanic screens

Mechanics work on their own jobs: inspect, diagnose, request approval and parts, do the work, and move the job through its stages. Design these for a tablet in the workshop too: big touch targets, few words. Sidebar: My Jobs, Parts (read-only catalogue).

M1 — My jobs

Screen: mechanic's assigned jobs. Staff app layout, sidebar items My Jobs (active), Parts. User menu "Kasun — Mechanic". Must also work well on a 1024px tablet: large cards and buttons (min 44px tall).

Top: 3 stat cards — Assigned to me (4), In progress (2), Waiting on customer or parts (1).

Tabs: Active | Completed today.

Job cards as large tiles: job #, plate in large text, make/model/year, mileage, customer complaint (2 lines), current stage badge, time in stage, estimated ready time, red "Delayed" badge when late, and a rust orange "Open job" button.

Sort by: priority / estimated ready time.

Empty state: "No jobs assigned to you right now".

M2 — Job card workspace

Screen: a mechanic working on one job card. Staff app layout, My Jobs active.

Top bar of the page: JOB-7F3A21 · CAB-4521 Toyota Axio 2016 · 61,200 km · customer complaint. A horizontal stage stepper (Checked in → Inspection → Diagnosis → Awaiting approval → Parts ordered → Repair in progress → Quality check → Ready for collection) with the current stage in rust orange, and one large primary button "Move to next stage: Quality check".

Tabs:

1. Inspection: checklist grouped by area (Engine, Brakes, Suspension, Electrical, Tyres, Body) with OK / Needs attention / Failed toggles per item, notes, photo upload, and an overall result (PASSED / NEEDS_ATTENTION / FAILED). Button "Save inspection".
2. Diagnosis: large text area for findings, and a "Repair tasks" list (task name, description, labour cost, done checkbox) with "Add task".
3. Additional work: list of extra items found (description, parts cost, labour cost) and a button "Send to customer for approval"; shows each item's customer decision (Pending / Approved / Declined).
4. Parts: table of parts requested for this job (part, qty, status Requested / Issued / Out of stock) and a "Request part" drawer with a searchable part list showing stock levels.
5. Activity: time-stamped log of all changes on this job.

Show a blocking message when trying to start repair while approval is pending: "Waiting for customer approval on 2 items".

Storekeeper screens

The storekeeper owns stock: parts, suppliers, issuing parts that mechanics request, and keeping stock above reorder levels. Sidebar: Inventory, Spare Parts, Requests & Stock, Suppliers.

S1 — Inventory overview

Screen: storekeeper home. Staff app layout, sidebar items Inventory (active), Spare Parts, Requests & Stock, Suppliers. User menu "Ruwan – Storekeeper".

1. Stat cards: Total parts (248), Low stock (9, amber), Out of stock (2, red), Pending part requests (5), Stock value (Rs.).
2. "Low-stock alerts" table: part number, name, in stock, reorder level, supplier, and a "Restock" button per row. Out-of-stock rows marked red.
3. "Pending part requests from mechanics": job #, mechanic, part, qty, requested time, buttons Issue / Reject.
4. "Recent stock movements" mini-list: time, part, type badge (RESTOCK green / DISPENSE blue / ADJUSTMENT grey), quantity (+/-), note.

S2 — Spare parts

Screen: spare parts catalogue. Staff app layout, Spare Parts active. Header with search (part number, name), filters (supplier, stock status: All / Low / Out of stock / Active / Inactive) and rust orange "Add part" button. Table: Part number, Name, Description (truncated), Price (Rs.), In stock, Reorder level, a small stock bar (green above reorder level, amber at or below, red at 0), Supplier, Status (Active/Inactive), Actions (Edit, Restock, Deactivate). Add/Edit part drawer: Part number*, Name*, Description, Price*, Quantity in stock*, Reorder level*, Supplier (select), Active toggle. Show the error "Part number already exists". Restock modal: quantity* (positive only), supplier, note, and "Confirm restock".

S3 — Part requests and stock movements

Screen: issuing parts and the stock ledger. Staff app layout, Requests & Stock active, two tabs: Part requests | Stock movements. Part requests tab: table Requested at, Job #, Plate, Mechanic, Part, Qty requested, In stock, Status badge (REQUESTED / ISSUED / REJECTED / OUT_OF_STOCK), Actions (Issue, Reject). Issuing opens a confirm modal: "Issue 2 × Front brake pads (BP-1042) to JOB-7F3A21? Stock will go from 6 to 4." If stock is insufficient, show the error "Only 1 in stock" and disable Issue. Stock movements tab: date range filter and type filter; table Date & time, Part, Type badge (RESTOCK / DISPENSE / ADJUSTMENT), Quantity (+ green / - red), Job # (for dispenses), Note, By (user). Export to CSV button.

S4 — Suppliers

Screen: supplier management. Staff app layout, Suppliers active.
 Header with search and rust orange "Add supplier" button.
 Table: Name, Contact person, Email, Phone, Parts supplied (count), Actions (View, Edit).
 Supplier detail drawer: contact details and a list of parts from this supplier with stock levels and a "Restock all low items" button.
 Add/Edit supplier drawer: Name*, Contact person, Email*, Phone* (format +94XXXXXXXXX or 07XXXXXXXXX), Address. Show the error "Supplier with this email already exists".

Admin screens

The admin (owner/manager) monitors and configures rather than doing daily operations, as your PDF puts it. The admin can open every staff screen above, plus these. Admin sidebar: Overview, then grouped sections Front desk (Customers, Appointments, Job Cards, Billing), Inventory (Spare Parts, Suppliers), Management (Users & Roles, Employees & Payroll, Services & Maintenance Rules, Reports).

A1 — Business overview

Screen: admin home dashboard. Staff app layout with the full grouped sidebar; Overview active. User menu "Admin – Owner".

1. Date range selector (This month / Last month / Custom) top-right.
 2. KPI cards: Revenue (Rs. 1,245,000, +8% vs last month), Jobs completed (86), Average repair time (1.6 days), Outstanding invoices (Rs. 142,500), Customer rating (4.6 / 5).
 3. Line chart: daily revenue for the selected range.
 4. Bar chart: jobs completed per mechanic, with average time per job.
 5. Two panels side by side: "Workshop right now" (count of jobs in each stage as a horizontal bar) and "Low-stock alerts" (top 5 parts).
 6. "Top services" table: service type, jobs, revenue.
- Use the status colours only for up/down indicators; charts in charcoal and rust orange.

A2 — Users and roles

Screen: login account management. Staff app layout, Users & Roles active.

Tabs: Staff accounts | Customer accounts.

Staff accounts table: Username, Email, Role badge (ADMIN / RECEPTIONIST / MECHANIC / STOREKEEPER), Linked employee, Status (Active / Disabled), Last login, Actions (Edit role, Reset password, Disable).

"Add staff account" drawer: Username*, Email*, Temporary password*, Role* (radio cards with a one-line description of what each role can do), Link to employee record (select).

Customer accounts tab: Username, Name, Email, Phone, Vehicles, Joined, Status, Actions (Disable).

A small read-only "Role permissions" matrix panel: rows = functions (Manage customers, Book appointment, Create job card, Update repair, Manage inventory, Issue spare parts, Generate invoice, Process payment, Manage users, View reports), columns = Customer, Receptionist, Mechanic, Storekeeper, Admin, cells with check marks.

A3 — Employees and payroll

Screen: HR records and salaries. Staff app layout, Employees & Payroll active. Tabs: Employees | Payroll.

Employees tab: table Full name, NIC, Position badge (MECHANIC / RECEPTIONIST / STOREKEEPER / MANAGER), Phone, Hire date, Monthly salary (Rs.), Login account (username or "None"), Status toggle Active/Inactive, Actions (Edit).

Add/Edit employee drawer: Full name*, NIC* (9 digits + V/X or 12 digits), Phone*, Email, Position*, Hire date* (not in future), Monthly salary*, Link login account (select). Show the error "An employee with this NIC already exists".

Payroll tab: month picker (YYYY-MM); table Employee, Position, Monthly salary, Paid this month (Rs. or "Not paid"), Paid on, Actions (Record payment). "Record salary payment" modal: Pay month*, Amount (defaults to monthly salary), Notes. Show the error "Salary for 2026-09 is already recorded for this employee". Footer totals: total payroll this month, paid, remaining.

A4 — Services and maintenance rules

Screen: configure the service catalogue and the predictive maintenance rules. Staff app layout, Services & Maintenance Rules active. Tabs: Services | Maintenance rules.

Services tab: table Service name, Category, Default labour cost (Rs.), Estimated duration, Bookable online (toggle), Actions (Edit). "Add service" drawer.

Maintenance rules tab: explains in one line "These rules drive service reminders and vehicle health scores." Table: Maintenance item (Engine oil replacement, Air filter, Brake inspection, Timing belt, Coolant, Tyre rotation), Every X km, Or every X months, Applies to (All vehicles / specific make), Reminder lead (e.g. 1,000 km or 14 days before), Active toggle, Actions (Edit). Add/Edit rule drawer with those fields.

A preview panel on the right: "Example: Toyota Axio at 61,200 km, last oil change at 52,000 km → Oil change due in 800 km".

A5 — Reports

Screen: business reports. Staff app layout, Reports active.

Left list of report types: Revenue, Services, Mechanic performance, Inventory usage, Payroll vs revenue, Customer retention.

Main area for the selected report: date range and filters at top, one chart, then a detailed table, and "Export PDF" / "Export CSV" buttons.

Example shown: "Mechanic performance" – bar chart of jobs completed per mechanic; table Mechanic, Jobs assigned, Jobs completed, Avg. repair time, Rework count, Customer rating.

Also show a "Payroll vs revenue" summary card: Total revenue, Total salaries paid, Net income.

Backend work these screens depend on

About half the screens can be wired to endpoints you already have. The rest need the backend additions below, so the design and the API stay in step. Sorted roughly by how much depends on each one.

Needed	Screens that depend on it	What to add
Customer accounts	P3, all C screens	ROLE_CUSTOMER ; link User ↔ Customer (one-to-one); register creates both; "my" endpoints that read the logged-in user, e.g. GET /api/me/vehicles

Needed	Screens that depend on it	What to add
Login that returns the user	P2, every screen	<code>GET /api/auth/me</code> returning username + roles, or JWT/session login, so the app knows which layout to show
Repair stages	C1, C5, R1, R6, M1, M2	A fixed status list (enum) for job cards with the 10 stages, allowed moves between them, and a <code>JobCardStatusHistory</code> table (stage, time, who) for timelines and "time in stage"
Estimated completion and delay	C1, C5, R1, R6	<code>estimatedReadyAt</code> on <code>JobCard</code> ; "delayed" = now is later than it
Repair tasks	C5, M2	Endpoints for <code>RepairTask</code> (entity exists, no API yet)
Customer approvals	C6, M2	<code>AdditionalWorkItem</code> (description, parts cost, labour cost, decision PENDING/APPROVED/DECLINED) and approve/decline endpoints restricted to the job's own customer
Part requests	M2, S1, S3	<code>PartRequest</code> (job, part, qty, status, requested by); storekeeper issues it, which calls the existing dispense logic; fix the <code>/api/inventory/**</code> rule so mechanics can request
Vehicle mileage and year	C2, C3, R3, R5	<code>year</code> , <code>mileage</code> , <code>fuelType</code> on <code>Vehicle</code> ; <code>mileageAtCheckIn</code> on <code>JobCard</code>
Predictive maintenance	C1, C3, C4, A4	<code>MaintenanceRule</code> (item, every km, every months, applies to make) + <code>ServiceRecord</code> per vehicle; a service that computes due/overdue items and a health score
Service catalogue	C4, A4	<code>ServiceType</code> entity (name, labour cost, duration, bookable) instead of free-text <code>serviceType</code>
Slot availability	C4, R4	<code>GET /api/appointments/availability?date=</code> and a clash check before saving
Invoice from job card	R7, C7	Build invoice lines from <code>PartUsage</code> + labour; real foreign keys to customer and job card; block overpayment

Needed	Screens that depend on it	What to add
Notifications	Top bars, C8	Notification table + bell endpoint; email/SMS later
Users and roles admin	A2	Endpoints to create staff accounts, change role, disable account
Update/delete endpoints	Most edit drawers	PUT and DELETE (or deactivate) for customers, vehicles, parts, suppliers, appointments
Ratings	A1, A5	rating and feedback on a completed job card (from the PDF's "customer feedback and ratings")

A practical order: customer accounts + login that returns the user → repair stages and history → approvals and part requests → predictive maintenance. That matches the team split in your PDF: Aneesha (customer accounts, vehicles), Sohan (stages, tasks, approvals), Tevindu (part requests), Sew (invoice from job card).
